

GPS devices are based on latitude and longitude, and all have a setting where you can enter Coordinates. Refer to your manual, or do a web search for “how to use gps coordinates on a garmin” (or tomtom, whatever device you have).

On a maps program, such as Google maps, Bing maps, enter the **latitude and longitude** coordinates in the search bar, exactly as provided on the rental page. A map to that location will be provided to you, with options to get directions.

Example using Google maps to locate the Old Log Cabin:

Example using Bing maps to locate the Old Log Cabin:
